Keep your engine running

With genuine spare parts from Perkins

90 years ago, Perkins was the first company to recognise the potential of the diesel engine. Until today, Perkins has delivered around 22 million engines and is one of the world's leading suppliers of diesel engines. From the 1938 P6 series to the ultra-compact 400 series and the fuel-efficient 1200 series, the engines are specialised for a wide range of applications and designed for long life.

As an exclusive Perkins distributor, BU Power Systems has been working with Perkins for 30 years. This means that you are in good hands with us when it comes to all original parts for the approximately 5,000 different applications of the engines – and we are also at your side with advice and assistance when it comes to spare parts for older Perkins series, such as for engine types 3.152, 4.236, 1004.4. This means that we can help your engine back on its feet quickly and competently.
