

Perkins genuine spare parts. For a long engine life.

Whether you carry out the repairs on your engine on your own or you commission our service team: BU Power Systems offers you a comprehensive range of Perkins genuine spare parts and services for your engine.

The use of non-genuine spare parts involves various risks that must be taken into account:

- Replicas may not match the original parts 100%. The requirements for our spare parts are determined in thousands of operating hours on our prototype engines before they are launched on the market, to ensure that you are on the safe side later.
- Dealers that sell non-original parts have no access to the original component data for your specific engine. There is therefore a risk that orders will be delivered not only incomplete but also with the wrong parts.
- Replicas may not meet quality standards and are less robust. For example, Perkins® EcoPlus filters have been proven to last 45% longer than conventional filters.
- The assembly of non-original Perkins spare parts may affect the engine's correct functioning, which may cause downtimes and expensive repairs.

Our genuine Perkins spare parts are perfectly adapted to the needs of your engine and therefore ensure the longevity of your engine. Our stock and order analyses ensure that common spare parts are always available comprehensively and at short notice.

The BU Power Systems spare parts portfolio includes all parts for your engine, from maintenance parts and engine-specific maintenance kits to engine overhaul kits (e.g. pistons, rings, bushes, bearings, gaskets), electric components (e.g. alternators, glow plugs, switches) and engine oil (Perkins Diesel Engine Oil). This allows us to help you enhance your range of services and at the same time optimise your spare parts warehouse – as well as minimise your costs.

As your exclusive Perkins distributor, BU Power Systems offers original quality at reasonable prices. If you have any questions, you can reach us via our service phone 0800 5451 5451.
