

Quality that pays

Perkins genuine fuel filters and injection systems

Requirements on filter systems of modern combustion engines are steadily increasing: More engine power, higher pressures and temperatures at lower fuel consumption and lower emissions. Fuel injection systems are complex and essential for optimum engine operation, so Perkins makes every part with highest precision.

Quality you can rely on

Perkins genuine spare parts are perfectly matched to your engine and therefore ensure a long engine life. This means you can be 100% confident in the performance and efficiency of your engine, even in the long term - with quality that pays.

Your advantage

- High quality genuine spare parts
- Precision engineered to the latest factory specification
- Repair service possible for the injection technology
- Overhauled and therefore resource-saving exchange parts available
- As good as new quality and performance

As your exclusive Perkins distributor, BU Power Systems offers original quality at reasonable prices. If you have any questions, you can reach us via +49 5451 5040 0 or per mail at parts@bu-power.de.

The difference is in the detail

The most common reason for injector replacement is wear from dirt and contamination in the fuel system. Injector tests show that Perkins genuine fuel filters provide excellent protection.

When comparing with filters from well-known manufacturers, the service life of the injectors was tested with heavily contaminated fuel.

The result: The injectors protected with Perkins original fuel filters showed significantly less wear and with it a smaller leakage rate than those tested with the third-party filters.

The service life of engines and injection systems can be significantly extended by using Perkins genuine fuel filters.
